Rain gutter cleaning system

SKU (Art. No.):	ReRiRe127016.1
Material:	Soft Tissue PVC UV & weather resistant
Connection Method:	Welded / glued
Thickness:	1.5 mm
Total length:	12 m
Gutter dimension:	125/150mm
Color:	anthracite
Content: 	1 pc hose incl. valve 1 pc air unit 1 pc remote control 1 solar panel incl. charging cable 1 pc glue 1 pc spray glue 2 Gloves

:

LUCID No.:
DE2897179728869

Description

Our solar-powered gutter cleaning system cleans your gutters automatically by remote control or fully automatically with an integrated rain sensor. It removes leaves, dirt and other deposits from the gutter conveniently and reliably without having to step on the roof. For this purpose, a flat-lying cleaning hose is inserted into the gutter and inflated.
Due to its expansion, it lifts the dirt and reliably transports it to the outside via both sides of the gutter. This keeps gutters clean and functional, while the ongoing work, costs and the risk of cleaning are reduced to a minimum.

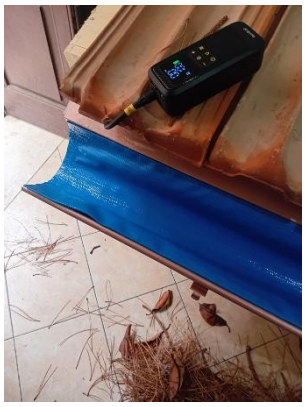

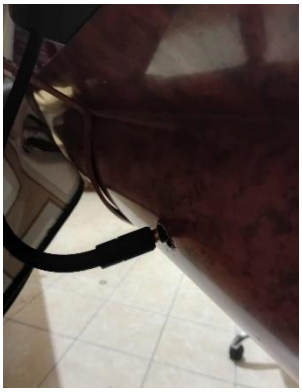

Due to our high quality standards, we grant a warranty of 15 years.

Installation instructions:

Clean the rain gutter **thoroughly**.

	Measure the length of the **rain gutter.** Length for cutting: measured 5 cm from the drainpipe.
	**Cleaning hose** (Length variable) to the required length **Crop** Length for cutting: Measured 5 cm from the drainpipe.
	Glue **the cut end of the** cleaning hose **with special superglue**. Adhesive surface approx. 5 – 10 mm Apply glue in waves and squeeze the hose. (Use only the included product!)
	Position **the** side of the valve **in the direction of the drain**.
	**Drill the hole** for the connection valve into the rain gutter **using the template supplied**.
 	Glue the **cleaning hose** into the rain gutter using spray adhesive. (Only use the supplied product!)

 	Adjust the **air unit** to the hose length for the required **amount of pressure**.
 	Connect the hose of the air unit to the **valve** of the cleaning hose. Mount the unit in a position that is as weather-resistant as possible.
 	**Connect the solar panel** to the air unit.
	Now **start** the system **by remote control.**
